Lithium, from Argentina to the world

Since 2011, a highly valued and much awaited global event

After consolidating as one of mining industry's preferred events at both the Latin American and World levels, the eleventh edition of the International Seminar: Lithium in South America will be held next May 31 and June 1.

With the participation of important companies engaged in the lithium business and the presence of well-known specialists and opinion leaders, the conference offers the most relevant information on the sector and the possibility to establish contact with strategic actors, giving access to not only expert projections and analyses but also to the various business opportunities that emerge during the two-day event

Seminar characteristics:

Location in the Lithium Triangle: Alternate venues in Jujuy, Salta and Catamarca

+500 Attendees in every edition

Presentations in Spanish and English; simultaneous interpreting available

Business rounds and scheduled personal meetings

International attendance and relevance

+ Top lithium companies

More on the event

2022 Edition Overview

Joe Lowry

Lithium, burgeoning present & promising future

The reasons not to miss it

Lithium prices are now enjoying an all-time-high while since 2020, this sector has acquired such significance that this resource, essential for the transition to electric transportation systems, has mustered strong support from the investment community and the companies in charge of its production and development. Concurrently, countries such as USA and China, along with ambitious plans in Europe, seek to advance in the electrification and decarbonization of their production matrices, an endeavor that will make lithium a leading supply over this decade.

The keys:

+Anticipated investments and M&A scenario

Rising prices and growing markets

Increased demand

Geopolitical evolution and favorable global agreements

Argentina and its North-West potential

A region to be kept under close watch

The **International Seminar**: Lithium in South America is held in a strategic location in Argentina, more specifically at alternate venues in the provinces of the Argentinean North-West (NOA: Jujuy, Salta and Catamarca). From this spot, the conference has consolidated as a central forum for the actors who make up the lithium development chain and, year after year, come together to ramp up business, to discuss developments in the sector and their prospects, as well as to establish direct relationships in a space designed to meet the networking needs of companies and institutions.

An ever growing attraction on the international stage

A lot has been said about the country's role in the supply of lithium-based products and the need to realize the huge value potential buried in Argentina's salt flats. Alongside with copper (49.47%), at present it is one of the mining segments that most future investments has got earmarked at the national level, accounting for 36.3% of the estimated total.

The reasons?

- Competitive advantages vs. its regional competitors
- Favorable costs and legal framework
- High-quality and abundant resource
- Experience: Lithium is produced in Argentina since 1997
- Possibility to use conventional and alternative technologies
